Table of Contents

<u>Title</u>	<u>Page</u>
Preface	—
Route Location	1
Methods of Computation	17
Curve Problems in Highway Design	22
Type of Pavement	26
Reconnaissance	29
Aerial Photography in Route Surveying	33
Concrete, Reinforced Concrete, and Prestressed Concrete	37
Design of Concrete Structures	40
Fundamental Assumptions for Reinforced Concrete Behavior	43
Footings and Foundations	51
Concrete Building Systems	57
Floor and Roof Systems	60
Monolithic Beam-and-Girder Floors	63
Precast Concrete for Buildings	68

Prestressed Concrete	72
Effects of Prestressing	75
Highway Construction and Maintenance	77
The Aims of Highway Engineering	81
Highway Construction Materials	86
Pavement Foundation	93
Concrete and Composite Pavement	95
Highway Drainage	99
Highway Maintenance	102
Maintenance of Bridges-Substructure	106
Maintenance of Superstructure-Girders	109
Coordinated Planning of Projects (<i>Multiple Purpose Projects</i>)	113
Earthquake	116
References	121

PREFACE

This textbook includes a comprehensive presentation of the materials almost in accordance with the different aspects of whatever is related to the technical and professional conceptions required to be learned by civil engineering students at undergraduate levels.

It goes without saying that the more relevant the ESP teaching materials are to the field of study of the learners, the more enthusiasm is created by those learners and consequently the objectives of teaching are highly materialized. That is why it has been tried to make this textbook very close to the original genre and literature of the civil engineering principles.

In preparing this textbook, the result of the consultation with the experts and the outcome of the research experience on ESP teaching have been among the significant factors that have been taken into consideration.
