Preface

This book discusses 43 patients with definitely diagnosed neurological diseases in the Iranian population. The approach of the authors is resolutely practical as they have tried to introduce and discuss clinical and laboratory findings step by step. In addition, the latest and most practical diagnostic and therapeutic algorithms are collected that provide a practical approach to diagnosis and management, which make the book easier to consult. The related tables help the huge volume of the material to be reviewed succinctly. The use of radiologic figures, biopsy samples, and laboratory findings has added to the richness of the content. For each disease, a list of differential Diagnosis is presented and then discussed. The “Key Points” section, at the end of each chapter, provides a brief summary at a glance.

This book is the result of several months of outstanding efforts of authors and the revision of the content by experts in this field in our country. This book as a valid resource is intended for everyone interested in clinical neurology, especially neurologists and residents, to gain comprehensive and concise knowledge of the most important neurological disease.

Please do not hesitate to share with us your invaluable comments to improve the next editions. We are deeply appreciative of our colleagues as this work would not have been possible without their contribution.

Hossein Pakdaman, MD

Professor of Neurology

President of Iranian Neurological Association

Chair of Neurology Department, Shahid Beheshti University of Medical Sciences,

Tehran, Iran

Table of contents

Preface.....	IV
Table of contents.....	V
Abbreviations	X
Case 1:Dyspepsia, sensory disordersand unsteady gait.....	1
Case 2:Confusion and lower limb weakness	8
Case 3:Dementia followed by Rheumatoid Arthritis	15
Case 4:Paresthesia and urinary urgency	26
Case 5:Long-standing headache with behavioral changes	31
Case 6:Memory and visuospatial problems	40
Case 7:Progressive memory loss, behavioral problems and difficulty in walking.....	48
Case 8:Acute Hemichorea–Hemiballism.....	55
Case 9:Unconsciousness with history of nausea and headache	63
Case 10:Bilateral facial nerve palsy and unilateral hearing impairment and visual loss.....	69
Case 11:A man with cognitive decline and intractable itching.....	76
Case 12:Sudden onset motionless and unusual speech	84
Case 13:Diplopia, skin lesion and arthralgia	90
Case 14:Sudden weakness, diplopia and dysarthria.....	98
Case 15:Headache, cognitive decline and hearing loss	104
Case 16:Confusion and hemiparesis with history of optic neuritis	111
Case 17:Monozygotic boy twins with recurrent neurological impairment	120
Case 18:Seizure presenting with visual hallucination	139
Case 19:Uncontrolled seizure responded to IVIG	146
Case 20:Progressive dystonia, cognitive decline and personality change in a boy.....	151
Case 21:Unilateral vision loss and headache.....	159
Case 22:Memory problems, gait difficulties and sphincter incontinence.....	167
Case 23:Confusional state following serial seizures	174
Case 24:Constant retro-orbital pain and headache.....	181
Case 25:Rapidly progressive muscle weakness, joint pain and ataxia	187
Case 26:Memory and speaking problems with history of radiotherapy	197
Case 27:Stiffness, muscle spasms and repetitive fall.....	206
Case 28:Abnormal movements accompanied by eating dystonia	212
Case 29:Progressive gait disturbance and visual loss	218
Case 30:Acute onset of abnormal behavior and talking difficulty.....	223

Case 31: Visual disturbance and headache in a boy	236
Case 32: Sudden onset of talking difficulty and right side weakness with the history of seizure	243
Case 33: Respiratory distress in a girl with the history of seizure and ataxia	250
Case 34: Diplopia, numbness and generalized weakness.....	258
Case 35: Chronic progressive weakness of the extremities.....	267
Case 36: Progressive proximal weakness of the extremities	273
Case 37: Progressive muscle weakness and shortness of breath	279
Case 38: A young patient with muscle weakness, seizure and gastrointestinal symptoms	288
Case 39: Progressive muscle tightness associated with weakness.....	294
Case 40: Sudden diplopia, dysphagia and areflexia following upper respiratory illness	300
Case 41: Recurrent seizures and memory impairment.....	305
Case 42: Gradual progressive weakness in limbs	314
Case 43: Dysphagia, ptosis and diplopia.....	322
Index	327
