Appendices	115

Forewords

“General English for the Students of Health Sciences” has been designed to help students in health science disciplines. As the materials have been adapted from wide range of medical contexts, the whole array of health science majors can benefit from a variety of subjects dealt with in the book.

This book including ten chapters has been designed in a way to be used in a full academic semester as a three-credit course for the students with pre-intermediate background knowledge of English language.

The present book helps students get familiar with the basic health science lexis: collocations. Moreover, it equips them with skills in reading and writing as they are required to make outlines out of the texts.

This book has been pilot studied with the students at Iran University of Medical Sciences before being rendered to be published. It is recommended for all branches of allied sciences: laboratory science, radiology, operating room, anesthesia majors, rehabilitative sciences, nursing and midwifery and biology majors.

As with any work, this one also cannot be without shortcomings and we hope that this endeavor would pave the way for the students who actively engage themselves in their academic ESP classes.

The authors welcome any constructive suggestions or criticism with open heart and they would certainly apply them in the next editions if they are mailed to hatami_k@yahoo.com or mihandoust2001@yahoo.com.
