APPENDIX A: THE CORPUS	199

Preface

The present book is entitled "The Generic Structures and Lexico-grammaticality in English Academic Research Papers". This book being grounded on systemic functional linguistics (SFL) is twofold in its aims. Firstly, it reviews the gener analysis theories that are inherent in English academic research papers, secondly it aims to review systemic functional linguistics theory. To make the concept clearer, a study entitled the title of the book is shown on three different disciplines consisted of linguistics, chemistry, and software engineering utilizing Hasan's (1989) Generic Structure Potential (GSP) model of text analysis and how such structures are characterized in terms of the elements of metafunction system which is a category of the linguistic in Halliday's theory (1984). Then by referring to the results of the study, the last chapter is devoted to different ideas of the authors depending on those studied on such subject before.
