Introduction

The main objective of this book has been to provide the university students of Linguistics with an authentic, comprehensive, and reliable source of information. The book is based on a number of great volumes ever published in the field of phonetics and Phonology. Attempts have been made to render the whole volume as comprehensive and informative as possible. This book is designed in five chapters, namely, Phonetics, Phonology, Articulatory Correlates of Distinctive Features, Rule Ordering, and Optimality Theory. The authors have devotedly tried to acquaint the students with the basic notions of phonetics and phonology. In addition, appropriate exercises have been provided together with answers to enhance learners' relevant knowledge.
