Foreign views on the invaluable structural evolutions achieved during the four decades after the victory of the Islamic Revolution, and their interaction and interrelation with current issues and challenges can not be as transparent and accurate as the domestic views; such a view requires a realistic approach to recognize the components of growth without prejudice.

Agricultural and natural resources sector is one of the major economic sectors that have been undergoing tremendous development during the past four decades, after the victory of the Islamic Revolution. Such developments are the result of dedicated efforts of farmers, rural and nomad people and offcourse support and guidance of the government. The sector has been going through impressive structural and infrastructural changes in villages and tribal society.

Although we are still far from achieving the targets determined by directives of Imam Khomeini and advises of the Supreme Leader Ayatollah Khamenei on providing food security throughout the country and elimination of poverty and deprivation in rural communities which play productive, dynamic and cultural role nationwide, but with a fair judgment we can claim that the events and developments in the above fields can be considered a dramatic change.

The purpose of the present book is to provide comparative evidences and studies on macro indicators, production indices and support services for agricultural and natural resources, rural and nomadic development during two periods of 1979 and 2019.

The purpose of the data presented here is to induce an optimistic and productive insight in readers about the future of this important economic sector, has a significant role in national security, food security and business environment of the country.
